Duration is a measure of the sensitivity of the price (the value of principal) of a fixed-income investment to a change in interest rates. Duration follows the concept that interest rates and bond prices move in opposite directions. Rising interest rates mean falling bond prices, while declining interest rates mean rising bond prices. Duration is expressed as a number of years and estimates the effect that a 100 basis point (1%) change in interest rates will have on the price of a bond.)

‡ Blended Benchmark consists of 40% Bloomberg Multiverse Total Return Hedged USD Index, 35% Morningstar Global Leveraged Loan Index, and 25% Bloomberg Emerging Markets High Yield Index. The Morningstar Global Leveraged Loan Index was previously known as the S&P Global Leveraged Loan Index. Morningstar acquired Leveraged Commentary & Data (LCD) from S&P Global on 6/1/2022, which included the LSTA Leveraged Loan index series. Data for the S&P Global Leveraged Loan Index prior to 10/31/13 represented returns of the S&P/LSTA Leveraged Loan Index and S&P European Leveraged Loan Index in the 75%/25% weighting (respectively) of the Global Index.

Morningstar Global Leveraged Loan Index: The Morningstar Global Leveraged Loan Index is a fixed-weighted index designed to measure the performance of the global senior loan market.

S&P/LSTA Leveraged Loan Index: Morningstar LSTA US Leveraged Loan Index (formerly S&P Leveraged Loan Indexes, S&P LL indexes) is designed to measure the performance of the 100 largest facilities in the US leveraged loan market.

S&P European Leveraged Loan Index: A market value-weighted, multi-currency index designed to replicate the European institutional leveraged loan market. The Index consists of over 390 loan facilities tracked by S&P's Leveraged Commentary and Data Group (LCD, an offering of S&P Global Market Intelligence) and represents over €98 billion in par value.

Bloomberg Multiverse Total Return Hedged USD Index: The Bloomberg Multiverse Index provides a broad-based measure of the global fixed income bond market. The index is the union of the Global Aggregate Index and the Global High Yield Index as it represents investment grade and high yield bonds in all eligible currencies.

Bloomberg Emerging Markets High Yield Index: The Bloomberg Emerging Markets Aggregate Index measures the performance of hard currency Emerging Markets (EM) debt, including fixed and floating-rate U.S. dollar-denominated debt issued from sovereign, quasi-sovereign, and corporate EM issuers.

Bloomberg Global Credit USD Hedged: An unmanaged index containing investment grade and high yield credit securities from the Multiverse represented in US Dollars on a hedged basis. (Multiverse is the merger of two groups: the Global Aggregate and the Global High Yield).

To determine if this Fund is an appropriate investment for you, carefully consider the Fund's investment objectives, risk factors, and charges and expenses before investing. This and other information can be found in the Fund's summary and full prospectuses, which may be obtained by calling (888) 889-0799, or by visiting our website at citynationalrochdalefunds.com. Read the prospectus carefully before investing.

Risk Disclosures:

Investing involves risk including loss of principal.

Bonds and bond funds are subject to interest rate risks and will decline in value as interest rates rise. Investing in securities that are not investment grade offers a higher yield but also carries a greater degree of risk of default or downgrade and are more volatile than investment grade securities, due to the speculative nature of their investments.

Investing in international markets carries risks such as currency fluctuation, regulatory risks, economic and political instability. Emerging markets involve heightened risks related to the same factors as well as increased volatility and lower trading volume.

Risks associated with bank loans include (i) prepayment risk which could cause the Fund to reinvest prepayment proceeds in lower-yielding investments; (ii) credit risk; and (iii) price volatility due to such factors as interest rate sensitivity and liquidity.

The Fund invests in life policies for which there is currently no established secondary market and are not considered liquid investments. If the Fund must sell a life policy to meet redemptions or other cash needs, the Fund may be forced to sell at a loss. The longer the insured lives, the lower the Fund's rate of return on the life policy. The underwriter's estimate of the insured's life expectancy may be incorrect. An insurance company may be unable or refuse to pay benefits on a life policy.

Diversification does not protect against market loss.
